Windmills

Moulton Windmill

High Street, Moulton, Lincolnshire, PE12 6QB
+44 (0) 1775 724929

Moulton Windmill was built in 1822 for Robert King. The tower stands 24 meters high and has 9 floors making it the tallest windmill in the United Kingdom. In 1894, the windmill was damaged in a severe storm and was converted to steam power. The mill continued to work until 1995 when the owner retired.

The Moulton Windmill Project Ltd. was set up in 1998 to restore the windmill to working condition. By 2013, the working systems were restored to milling condition and the mill has been producing flour under wind power since 2014.
